

WORK TO START ON THE ZANZIBAR

Manhattan Property Contains Same Vein as Pine Nut and Others.

GEOLOGY OF REGION IS INTERESTING

Engineer Shookley Examining the District, With Which He Is Impressed.

The determination of the Zanzibar company to begin active development work upon their group of Manhattan claims has aroused much interest in this city regarding this property, which is in the hands of Salt Laker. J. H. Shookley, the prominent mining engineer, who has recently made an examination of this group, as well as of the entire Manhattan district, has quite an interesting report upon Manhattan, which will be timely in this connection.

Is Easy of Access. "This district," says the report, "is located about forty miles north of Tropic and about twelve miles west of Belmont, formerly the county seat of Nye county. It is most easily reached by stage or automobile from Tropic. The camp is situated in an irregular clump of high hills constituting the extreme south end of the Toiyah range, which is a range of great hills trending northward some eighty miles. On all sides, except the north, these hills are surrounded by the north-south-trending sagebrush plains.

Severe Snows of Winter. "The altitude of Manhattan, now a camp of several thousand people, is about 7000 feet, but the adjoining hills reach much higher. These hills are covered by an abundant growth of piñon pine and cedar. The climate is severe, deep snows prevailing in the winter, which remain on the ground until late in the spring. The range in the vicinity of the new discoveries is made up of sedimentary rocks, predominantly of silty character. This formation, however, due to the great metamorphism to which it has been subjected, is often highly schistose in character.

Geology of District. "Interstratified with it are extensive layers of finely crystallized limestone and gray and black calcareous shales. These rocks are also highly altered, often siliceous, and in places changed to Jasperoid rocks. Several bands of igneous rocks of unusual type and knotted schist were also noted. The stratified rocks are tilted at angles varying from 20 to 65 degrees. Scarps evident making the lines of faults were noticeable. Judged by their appearance they are Paleozoic rocks of Silurian age.

Floot Fairly Abundant. "The mineral belt as shown today seems to be some five miles long by two miles wide, extending in a roughly northeast-southwest direction. The stratified rocks appear to be no less than 600 feet in thickness. Many fissures cut the formation. Croppings owing to surface decomposition and debris are not conspicuous, but float is fairly abundant. Already the slight development of the district has shown much auriferous ore deposits.

Property Excellently Located. "On the Zanzibar property the conditions as outlined above are depicted typically, and this fact, coupled with the remarkably good location of the property, together with the surface showing, render it a property of high-class merit."

Snows Have Gone. "Mr. Shookley recently wired to this city that he had been able to make a more thorough examination of the Zanzibar property since the snow has cleared away and he is all the more of the opinion that the same vein that crosses the Pine Nut and Manhattan districts, crosses the Zanzibar property. The management will begin work in earnest within a short time, following the clearing of the snows of winter.

With such prominent neighbors as those above mentioned, the company has little doubt that there will be developed on their own ground similar showings.

LITTLE BELL RUMORS AGAIN.

Reawakening of Acquisition of Mine by Daily West Company.

Rumors are again in violent circulation regarding the acquisition of the Little Bell mine of Park City by the Daily West company. For the past few weeks there have been whisperings of this, but nothing has ever been given to the public regarding such a deal, if it really is on foot.

As is well known, the Daily West company already owns 60,000 shares of Little Bell stock, and in order to secure the control of this Park City mine the company will have to secure at least 91,000 shares in addition. Just whether this can be accomplished is a matter of conjecture, as the owners of Little Bell stock are very confident that the mine is a winner in every way.

The Little Bell is showing most magnificently from all reports. Everyone who has visited the property speaks in the highest terms of its present physical condition. It would be a most valuable addition to the Daily West company, and something interesting in the eyes of wise ones within the immediate future.

Ore Shipments.

The Pioneer sampler released the following number of cars of ore, Saturday: Nevada, 4; Bingham, 2; Tintic, 1. The Taylor & Brunton sampler released the following: Tintic, 17; Bingham, 10.

Report made to the Secretary of State of the State of Utah, of the condition of

NEW COMPANY IS FORMED FOR ELY

Salt Lakers Organize Company to Operate in the Duck Creek District.

There has been formed by various Salt Lakers a company to be known as the Ely Gibraltar Mining company, owning sixteen claims in the Duck Creek mining district. This district is sixteen miles north of Ely, and has already clearly established its value as a producer of lead, gold and copper.

Members of Official Family.

The names of the officers of the Ely Gibraltar for the first year will be M. M. Johnson, the well-known Salt Lake insurance man; D. C. McDonald, vice-president; Charles E. Street, secretary and treasurer. The articles of incorporation, which were to be filed Saturday afternoon, provide for a capitalization of 600,000 shares, of a par value of \$1 each.

Rich Lead-Gold Ore.

There are on exhibition in this city specimens of ore from the ground within this incorporation that are extremely rich. Assays show that from one ledge on the group, which is twenty feet wide on the surface, values in lead to 75 per cent are obtainable, and 44 in gold. This ledge can be traced for an enormous distance, and from it the management expects to extract no small portion of its future resources.

Large Copper Values.

Across the group of claims above mentioned, in addition to the lead-carrying ledge and gold values, there is a large ledge carrying copper, and it was stated Saturday that the last assay made of this ore brought 41 per cent copper as the result. D. C. McDonald has been made the manager of the company, and will inaugurate without delay a most vigorous campaign of development work.

FINE WEEK ON 'CHANGE.

Record of Same Week Last Year Exceeded by Large Margin.

Saturday's session on the local exchange was marked in that it proved the local stock market was strengthening finely, and there is every evidence that the great campaign of buying and selling high levels soon will be on in full force. Saturday's session was a record, a total of 27,700 shares changing hands, representing a market value of \$1,192,235. The total sales for the week just ended amounted to 224,615 shares, representing a market value of \$1,077,025. The same week last year there were 23,501 shares sold, of the value of \$1,077,025, which great increase may be taken as an example of how the mining stock business is increasing in this city.

Daily-Judge, Columbus Consolidated, Little Bell and practically all the stocks that were traded in sales closed strong. The quotations for the day closed as follows:

BUYS EQUIPMENT HERE.

John Fowler of Pioche Brings Property Quietly to Front.

John Fowler of Pioche is in Salt Lake for the purpose of securing equipment for his mining properties near Pioche. The equipment secured is a steam boiler of sufficient power to enable the company to prosecute development work in a most vigorous fashion.

For several months Mr. Fowler has been quietly working his property, which is located six miles west of Pioche. With him came a force sufficient to do tolling work during the winter, and some very promising ore bodies have been opened up on this ground. Assays from the ore have run as high as 65 per cent lead and 50 ounces silver, and 62 per cent lead and 30 ounces silver.

One of the claims included within this district is an old producer, and considerable low-grade ore is exposed there now. The company expects soon to join the list of shippers to the local market.

Boston Copper Letter.

James A. Pollock & Co. furnish the following Boston copper letter, received over their private wire: "Our local market opened quiet, but firm and well developed considerable strength. Buying orders made their appearance and better prices resulted. The tone continued firm, notwithstanding the profit-taking. The closing was irregular."

Ore and Bullion.

The ore and bullion receipts for Saturday, given by McCormick & Co., were as follows: Ore, 324,150; bullion, 234,000. The total ore and bullion receipts for the week were 324,150 and gold, 234,000.

The Metal Market.

The metal quotations for Saturday were as follows: Silver, 64¢; lead, 45¢; copper, 15¢.

RECORDS AND BOOKS WERE ALL SAVED

Balaklala Mining Company Has Preserved Much of Value From Fire.

DISASTER MAY CAUSE DELAY TO RAILROAD

Engineer White Will Proceed to Organize His Scattered Office Force.

Fortunate in saving his life, and unfortunate in losing his property, is R. T. White of the Balaklala Copper company, who arrived in Salt Lake Friday evening from San Francisco. Recently Mr. White moved the offices of the Balaklala company from this city to the coast city, as it afforded much better facilities for supplies and for reaching the property in California.

Books and Records Saved.

The San Francisco Balaklala offices were completely destroyed. The furniture had hardly been placed in the suite of offices, and Mr. White had scarcely organized his office force for the purpose of preparing the plans for the Balaklala smelter which the company will erect, before the disaster. The books, vouchers and all records of the office were placed in two safes, and Mr. White is of the opinion that these are all preserved intact.

May Delay Extension of Road.

All the negotiations between the company and the Southern Pacific Railroad company for the building of about one and one-half miles from the main line to the earthworks occurred, and the disaster will, in all probability, set back for some time this extension. Mr. White thought that all plans must be gone over again as soon as the railroad company has mastered the enormous difficulties that the earthquake created.

May Not Delay Plant.

Mr. White stated Saturday that plans for the power to be in the projected plant were about completed, and also the plans for the smelter itself, and it may take some time to pick up the matter where it was left off. For the time being an office will be established at Redding, and Mr. White will leave for the coast to gather together the scattered office force. He is of the opinion that the building of the plant will not be greatly delayed.

"When asked about the disaster that has scattered such ruin in San Francisco, Mr. White simply said: 'San Francisco is a beautiful city, and now it is all gone.'"

DEALS AT CALIENTE.

Easterners Buying Up Much of District's Good Looking Land.

Special to The Tribune.

CALIENTE, April 21.—D. A. Dupue and C. P. Harwell of Manhattan, Utah, mining men of experience, have been in camp for the past two days looking up some of this district's most promising properties. They have taken options on several fine gold and silver prospects, and state that for general mineralization they have never visited a district that will anywhere nearly approach Caliente's vicinity. There is hardly a piece of quartz which one picks up on the mountains surrounding Caliente, but will go from \$1 to \$4 per ton, and float has recently been picked up within a few hundred feet of camp showing gold values of \$10 and \$25 per ton, and copper grades and black oxide of copper going to 15 per cent copper and \$150 gold per ton.

May Erect Mill.

Burke and Blanchard, really men from Denver, were in camp for the past three days and started for the St. Lawrence district southwest of Caliente, where they have taken an option on the Blue Rock mine, which some years ago shipped ten tons of 45-ounce silver ore by mule team to the railroad connection in Utah. There is nearly 1000 feet of work on this claim in open cuts, shafts and tunnels, and the ledge in the tunnel is four feet wide with high-grade native silver and bromide showing clearly across the vein. These gentlemen are backed by abundant Colorado capital and say that they will, within the next thirty days, decide what will be done with their option, and if they decide that the property looks good to them with the development work they are doing down here, a mill will at once be erected on their claim for the treatment of the ore. They expect to have to pipe water three miles, but as they have a down-hill flow can put in the piping inexpensively and obtain water by gravity.

Stampede Is On.

One of the richest strikes ever made in this vicinity was made yesterday in the Old Glory mine, west of camp. James H. Whittier and Joe Callen, owners and locators of this property, struck a blind lead when in 100 feet in their tunnel, showing a width of five feet and a nine-inch vein on the foot-wall filled with chunks of free coarse gold, going \$15,000 per ton. There is a stampede to the scene of the new strike and while Caliente has not yet felt the effects of the rich find, miners from Delmar have already started for the district, and many claims have been taken up all around the rich mine.

New Yorkers Getting In.

James Blackman and French, New York brokers, have sent James H. Louche, an experienced mining expert from the Empire State, to this part of Nevada for the purpose of picking up any "good thing" he may find laying around, and the gentleman today visited several very promising prospects close to Caliente and took option on two of them for his principals, for sixty days. He states that he sees no reason for prospectors or investors going on and on the ridges of staking from the railroad north into the great exploited camps of Bullfrog and Tonopah when such a district as that surrounding Caliente is lying ready for pick or cash. He will remain here for a week and then go on to Los Angeles before returning to New York.

FAME OF UTAH ESTABLISHED.

Copper Properties Rapidly Reaching Point Where They Are Needed.

That the fame of Utah copper properties is spreading abroad, and creating no end of favorable comment on the part of the copper kings of the East, is shown by many publications throughout the Eastern country. The Boston News Bureau, in a recent issue, has shown that it bids fair to eventually be a large producer of copper, but the new production will not be much of a factor until 1907. The Bureau, in speaking of the great copper production of this country, says: "We estimate that copper production in the United States for the first quarter of 1906 amounted to 250,000,000 pounds, in round numbers, or at the rate of 1,500,000,000 pounds per annum. Copper production in the United States for 1905 was estimated at 300,000,000 pounds, an increase of 16 per cent over 1904. The Bureau then estimates that the production of Utah copper during the first quarter of the present year will be 12,000,000 pounds."

J. W. CURRIE, ASSAYER,

UTAH MINES WILL PLAY PROMINENT PART

Copper Interests Are Planning Great Things Regarding Utah Properties.

Now that the world-wide strength in copper and the developments at the Anaconda mine in the lowest levels have given renewed courage to the Amalgamated backers, 24 Broadway is moving again on the lines of copper control according to the plans which were abandoned some years ago, when it found the Montana and the International control of copper problems too difficult to be solved, says the News Bureau.

Great Move Is Planned.

At the present time it is figured that the Amalgamated has a production of 250,000,000 pounds per annum. The Juggernaut and the American Smelting and Refining company people are moving toward the gathering in of another 200,000,000 pounds of annual copper production.

To Develop Utah Mines.

Instead of buying mines producing 250,000,000 pounds, it is now proposed to develop in new fields in Utah and Nevada promising properties, so that in a large measure this amount of production can be realized through development. It is figured that with the American Smelting and Refining company, with 250,000,000 pounds annual output, and the Amalgamated, owning a similar output, these two interests, with proper alliances, can come pretty near to a regulation of output and a control of prices.

Mining Notes.

The price of lead has advanced from \$5.35 to \$5.50.

President Baird of the Western Exploration company will return to Chicago today.

Frank B. Cook, the prominent mining engineer, has returned from the Nevada camps.

The Sacramento is expected to declare the usual \$200 dividend on Monday.

C. O. Ellingwood, general manager of the Western Exploration company, will leave for San Francisco today.

CLEAN, HONEST MONEY
